## **ABSTRACT**

Nowadays, the proliferation of automobile industries is directly related to the number of claims in insurance companies. Those companies are facing many simultaneous claims and solving claims leakage. The project can be extended to green houses where manual supervision is far and few in between.

In Advanced Artificial Intelligence (AI), machine learning and deep learning algorithms can help to solve these kinds of problems for insurance industries. we apply deep learning-based algorithms, VGG16 and VGG19, for car damage detection and assessment in real world datasets. The algorithms detect the damaged part of a car, assess its location and severity. After analyzing and implementing our models, we can find out that the results of using transfer learning and regularization can work better than those of fine-tuning. Then we apply transfer learning in pre-trained VGG models and use some techniques to improve the accuracy of our system.

## ACKNOWLEDGEMENT

We express our sincere thanks and grateful acknowledgement to our Chairman **Dr.J.K.K.Munirajah M.Tech (Bolton). D.Litt.** for providing all facilities during the course of study in this college.

We would like to express our thanks to our Secretary madam **Mrs.KASTHURIPRIYA KIRUPAKARMURALI, M.B.A.,** who has provided all the available facilities and support that had help us in the completion of our project.

We have immense pleasure in expressing my extreme gratitude thanks to our beloved Principal **Dr.K.SRIDHARAN M.E.,M.B.A.,Ph.D.,M.I.S.T.E.,** for his encouragement and support.

We wish to express our heartfelt thanks to our respectful Head of the Department **Dr.N.SATHYABALAJI M.E., M.I.S.T.E., Ph.D** for his inspiring help, guidance, effort and energy in the right direction for completing this project.

We also thank our Industry Mentor **Ms.SWATHI** , who has been driving force to unveil the immense talents in us.

We also thank our Mentor **Mr.E.ANANTH.M.E** Assistant Professor, Department of Computer Science and Engineering, who has been driving force to unveil the immense talents in us.

We sincerely thank our lovable parents for their motivation and great support to complete this project successfully.

We also thank all the teaching and non-teaching staffs of the Department of Computer Science and Engineering and all my friends for their help and support to complete this project successfully.

# **PROJECT REPORT**

## **1. INTRODUCTION**

### **PROJECT OVERVIEW**

Nowadays, the proliferation of automobile industries is directly related to the number of claims in insurance companies. Those companies are facing many simultaneous claims and solving claims leakage. The project can be extended to green houses where manual supervision is far and few in between.

In Advanced Artificial Intelligence (AI), machine learning and deep learning algorithms can help to solve these kinds of problems for insurance industries.

### **PURPOSE**

Auto-detection of vehicle damage using photos taken at the scene of an accident can be very useful as it can drastically reduce the cost of processing insurance claims, as well as provide greater convenience to vehicle users.

## 2. LITERATURE SURVEY

TITLE	METHODOLOGY	AUTHOR/ PUBLICATION YEAR	ADVANTAGE	DISADVANTAGE
Applying image analysis to auto insurance Triage	Image analysis and pattern recognition are applied to automatically identify and characterize automobile damage.	Li Ying & Dorai Chitra,  2012	Because of the advancement of image analysis and pattern recognition technologies, the auto insurance industry could significantly benefit.	The drawback is that the automobile damaged can be analyzed only having white background otherwise it will be not able to give the desired results.
Image based automatic vehicle damage detection	This approach requires 3D computer aided design (CAD) modes of the considered vehicle to identify how it would look if it were undamaged.	Srimal Jayewardene',  ,2013	Automatically detecting the damage of the vehicle using photographs clicked at the accident site is extremely functional as it can greatly decrease the rate of processing insurance claims, and it will also provide greater	Vehicles have very reflective metallic bodies the photographs taken in such an uncontrolled environment can be expected to have a certain amount of inter object reflection. Application of standard computer vision.

A Secure AI-driven Architecture for Automated Insurance Systems Fraud Detection and Risk Measurement	Block chain, data analysis, machine learning, AI for damage identification.	M.Wassel,2019	Proposed classifiers ensure not only the best accuracy in detecting fraudulent claims but also can classify different types of fraud for insurance unlike the existing solutions	The major drawback of the proposed model is that it only identifies the physical visible damage and not of the internal or the interior damage.
Car damage detection and classification	CNN model is trained on Image Net dataset. After fine tuning the dataset, transfer learning with L2 regularization is Applied	Phyu Mar Kyu, Kuntpong Woraratpanya, 2020	Pre-trained VGG model not only detect damaged part of a car but also assess its location and severity.	Transfer learning and regularization can work better than those of finetuning.

## **EXISTING PROBLEM**

In proposed system firstly, it collects the pictures of one's damaged automobile, later use these pictures to feed into our ML model that makes use of image processing to identify the details of the image, using Image processing it analyses the percentage of damage of the automobile. Next, it segregates the pictures based on 2 factors which are replace and repair.

## PROBLEM STATEMENT DEFINITION

Mr.Vimal Rajesh is a 50 years old man. He had a own Car(Duster) and he worked at basic salary for past 30 Years , In this 30 Years he Faced a problem in Choosing Car Damage and Insurance claim.

- Vimal Rajesh wants to know the better recommendation for insurance claiming.
- He has faced huge losses for a long time.
- This problem is usually faced by lot of Customers.
- Mr. Vimal Rajesh needs to know the result immediately for Insurance claim.

Who does the problem affect?	Persons was claim the assessment amount
What are the boundaries of the problem?	People who vehicle and facing Issues of Insurance claiming
Where does the issue occur?	The issue occurs in Automobile industry interior part damage not fully estimated so issues occur in company side, particularly City side

### 3. IDEATION & PROPOSED SOLUTION

#### EMPATHY MAP CANVAS

## IDEATION & BRAINSTORMING

### Figure 3.2.1 Brainstorm Diagram

## PROPOSED SOLUTION

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	<p>Nowadays lot of money is being wasted in the car insurance business due to leakage claims. Claims leakage Underwriting leakage is characterized as the discrepancy between the actual payment of claims made and the sum that should have been paid if all of the industry's leading practices were applied. Visual examination and testing have been used to may these results.</p> <p>However, they impose delays in the processing of claims. There is no easy way of accessing and knowing about the part of the vehicle getting damaged. Often the processing of such a damaged part of the vehicle carrying the area of damaged part is cumbersome. New methods have to be proposed in order to make it faster and efficient. Processing of Insurance for the cars needs to be assessed in a quicker way so that claims can be provided to the damaged parts.</p>

<b>2</b>	Idea / Solution description	Automobile Industry is one of the major industry in a Country. This proposed system is Intelligent vehicle damage assessment and cost estimator for insurance companies using computer vision in artificial intelligence. The model will predict the location of the damage as in front, side or rear, and the severity of such a damage as in minor, moderate or severe and estimate the cost of damage of both car and bike.
<b>3</b>	Novelty / Uniqueness	Deep learning method used to fixed the problem and then Working on with VGG16 pre[1]trained model by adding extra layers to increase the accuracy while implementing the project.
<b>4</b>	Social Impact / Customer Satisfaction	The model developed will be used to fix the damage caused to the Vehicle quickly so that the vehicle can be modified to the old look and also for faster processing of cost of the damage to claim insurance quickly. This project can be used to save time for calculating the area and level of the damage quickly such that the insurance claim can be made efficiently.

<b>5</b>	<b>Business Model (Revenue Model)</b>	<p>This can also be used to help car companies as well.</p> <ul style="list-style-type: none"> <li>•Can collaborate with insurance companies.</li> <li>• Can collaborate with car companies</li> </ul>
<b>6</b>	<b>Scalability of the Solution</b>	<p>AI guided Application provides 24/7 service to clear all customer queries and guide them through all the processes. In future, it can be scaled as per the requirements of the insurance or car company to include answers to queries related to the cost based on the inputs Provided</p>

# PROBLEM SOLUTION FIT

Project Title: Intelligent Vehicle Damage Assessment &  
Cost Estimator for Insurance Companies

Project design Phase - 1

Team ID: PNT2022TMID44408

Define CS, fit into CC	<div>1. ## 4. REQUIREMENT ANALYSIS

### FUNCTIONAL REQUIREMENT

Following are the functional requirements of the proposed solution.

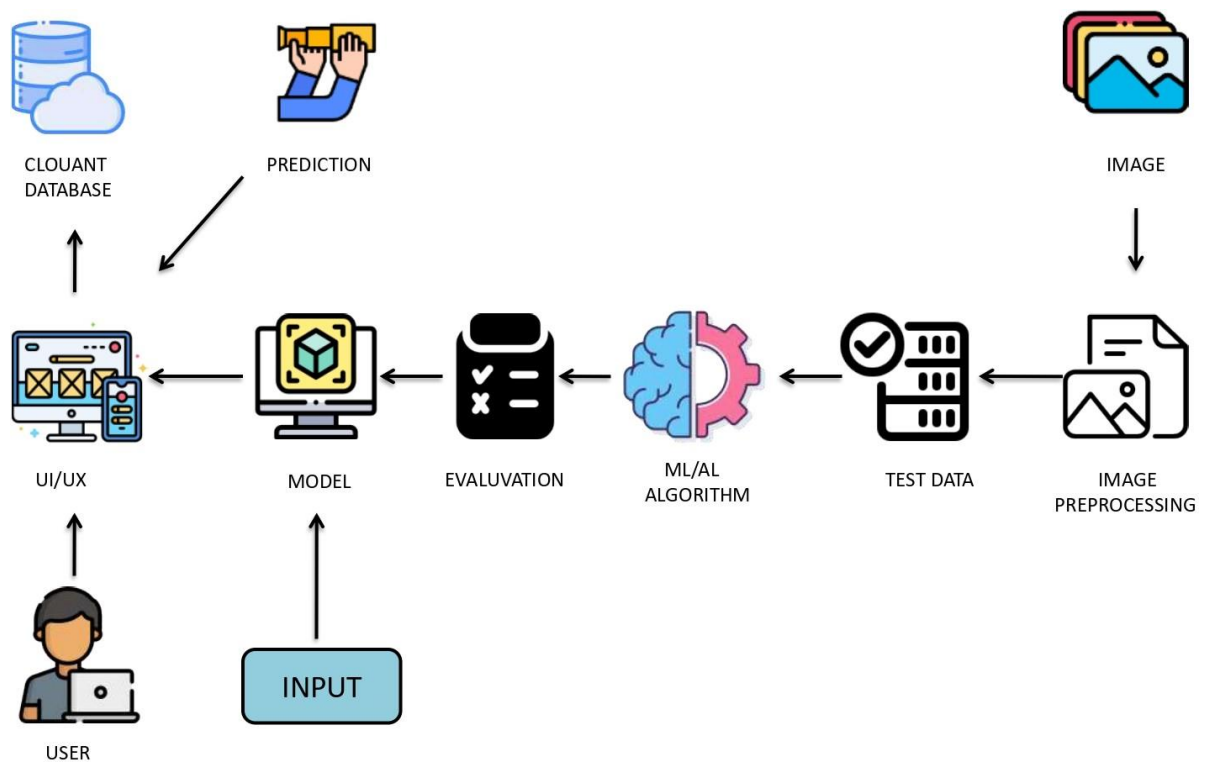

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	User Interface	User friendly and simple website
FR-4	Collect the datasets	Collect the data from the user side and their vehicle side information. Collect the data from about Insurance companies plans.
FR-5	Final Results	Model should be trained with high accuracy. Results obtained from the model should be displayed to The user with easy interpretability.

## NON-FUNCTIONAL REQUIREMENTS

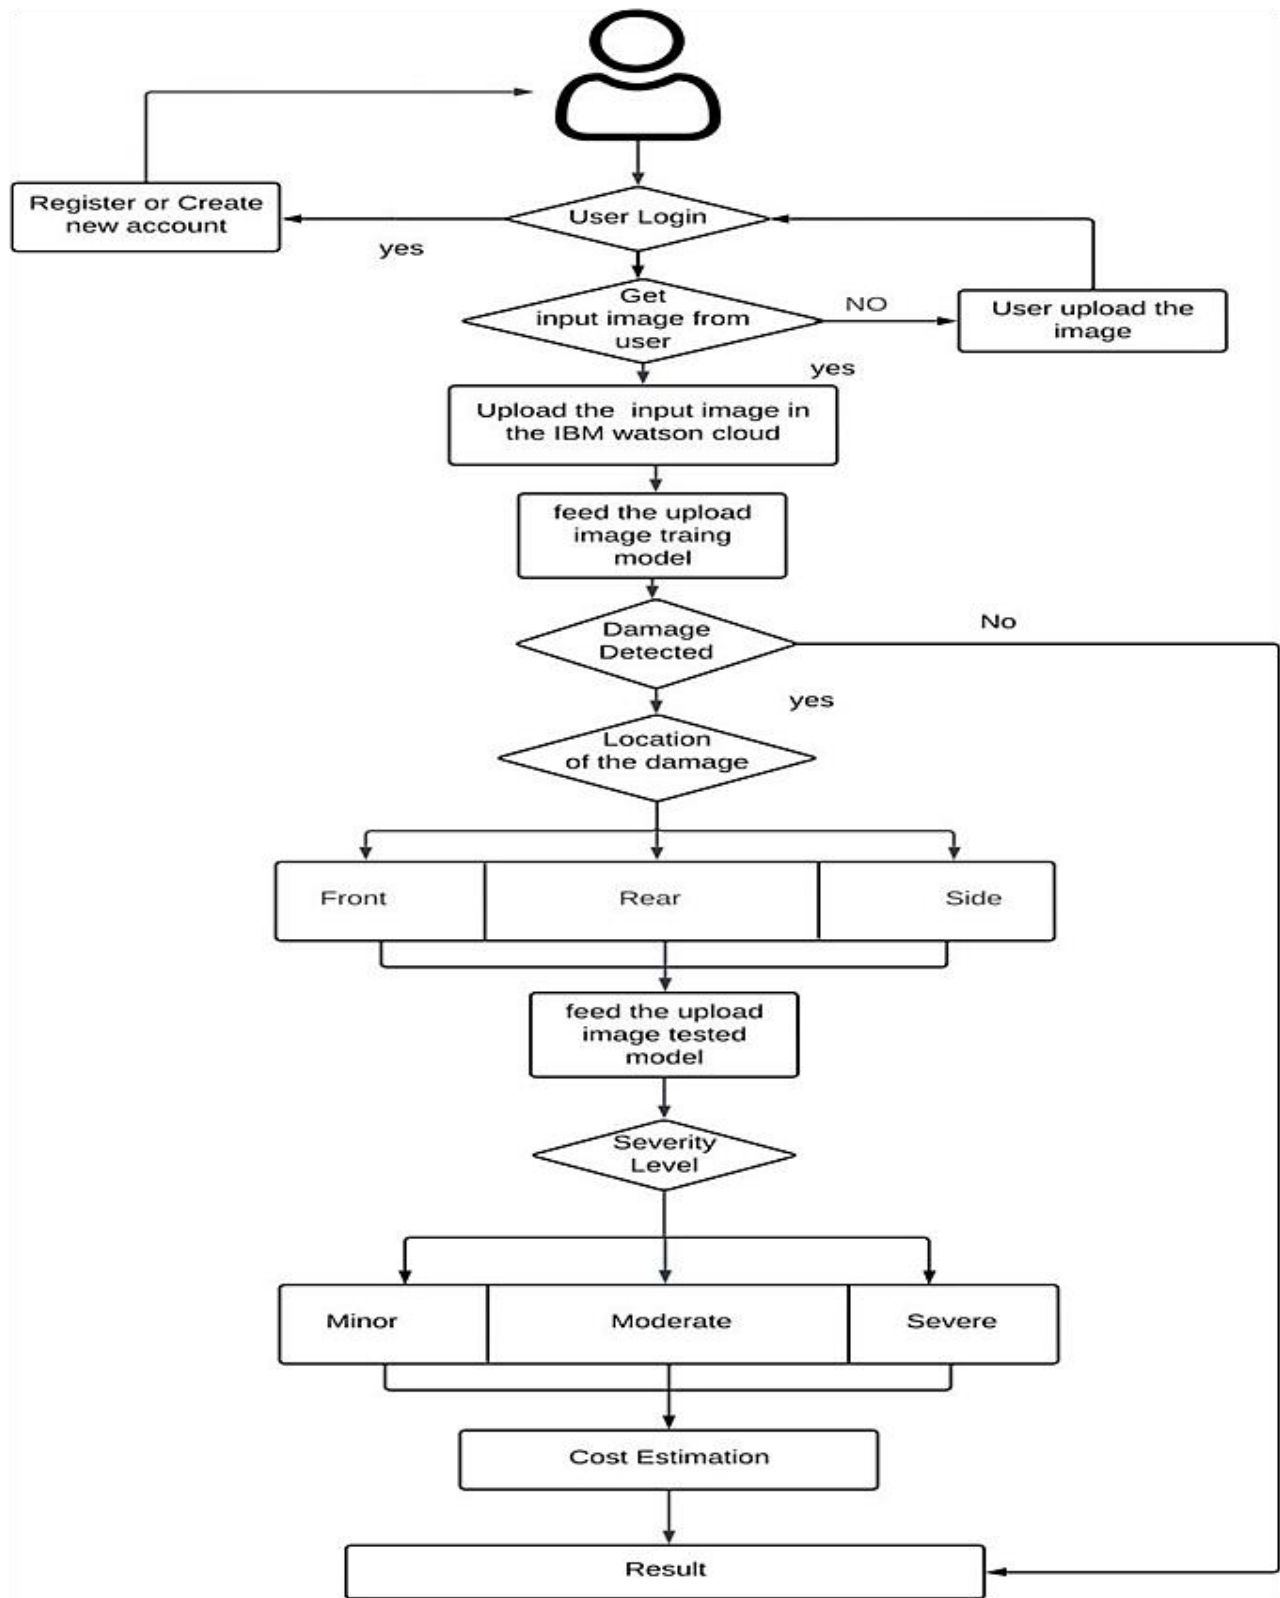

<b>NFR No.</b>	<b>Non-Functional Requirement</b>	<b>Description</b>
NFR-1	<b>Usability</b>	Intelligent model used to assessment the damage in the vehicle and estimate the cost to be provided by the insurance company.
NFR-2	<b>Security</b>	The credibility of the user and the confidentiality of user details about their vehicle must be maintained.
NFR-3	<b>Reliability</b>	This scheme can achieve good accuracy in damage estimation and cost estimation, thus providing accurate and unbiased insurance coverage to the user.
NFR-4	<b>Performance</b>	Real-time images are to be captured and uploaded to the website, where the proposed model performs damage assessment and gives the insurance cost accordingly.
NFR-5	<b>Availability</b>	The website should be compatible with web browsers on both mobile phones and computers.
NFR-6	<b>Scalability</b>	The proposed solution will be scalable in the future due to efficient and rapid analysis and accurate cost Estimation

## 5. PROJECT DESIGN

### DATA FLOW DIAGRAMS

**Figure 5.1.1** Data flow diagram

**Figure 5.1.2** Data flow architecture diagram

## SOLUTION & TECHNICAL ARCHITECTURE

### Technical Architecture

**Figure 5.2.1** Technical Architecture

**Table-1 : Components & Technologies**

S.No	Component	Description	Technology
1	User Interface	The user interacts with the web application	HTML, CSS, Python
2	Application Logic-1	Gets the user input image	Python
3	Application Logic-2	Obtaining model output for damage prediction	IBM Watson , Python
4	Application Logic-3	Obtaining model output for cost	IBM Watson , Python

5	Database	Data Type – Details of images and user inputs is stored	MySQL, Js, IBM DB2
6	Cloud Database	A database service in the cloud	IBM DB2, IBM Cloud ant etc.
7	File Storage	User details and user input received The images of the vehicle are stored in the cloud	IBM Block Storage or Other Storage Service or Local File system
8	Machine Learning Model	The purpose of the AI model is to estimate cost of the damaged vehicle.	The purpose of the AI model is to estimate cost of the damaged vehicle.
9	Infrastructure (Server / Cloud)	Let's use the AI model on the cloud server Using Flask on a Web Page	Local, Cloud Foundry, Kubernetes, Python Flask etc.

**Table-2: Application Characteristics**

<b>S. No</b>	<b>Characteristics</b>	<b>Description</b>	<b>Technology</b>
1.	Open-Source Frameworks	IBM Watson Opensource frameworks are used	Open source architecture technology IBM Watson
2.	Security Implementations	IBM Cloud	Certified WatsonAssistant Encrypted file systems are encrypted. Storage systems, key management systems.
3.	Scalable Architecture	Web Server - Static and dynamic website content Existing on the website will be updated accordingly User requestsand suggestions Application Server- Basic Upgrade Integrating websitefunctionality and updates The logic in the website can be done Database Server – Based on varying inputs The user supplied database will be modified Continuously	IBM Watson Assistant, Python,MySQL

4.	Availability	The AI misleadingly available to users anytime	IBM WatsonCloud assistance
5.	Performance	IBM Watson- Automated processes, deepThe learning model is trained using IBMWatson StudioFor better performance and faster access.	IBM WatsonAssistant

## USER STORIES

Use the below template to list all the user stories for the product.

UserType	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming mypassword.	I can access my account / dashboard by entering valid credentials	High	Sprint-1
Customer Details	Login	USN-2	As a user, I willreceive confirmation emailonce I have registered for the application	I canreceive confirmation email& click confirm	High	Sprint-1
Customer Uses	Dashboard	USN-3	As a user, I can register for the applicationthrough Facebook	I can register & access the dashboard with Facebook Login	Low	Sprint-4
Customer Options	Details about insurance companies	USN-4	As a user, I can register for the applicationthrough Gmail	I can register & access the dashboard with FacebookGmail	Medium	Sprint-1
Customer usage	Login	USN-5	As a user, I can log into the application byentering email &password	I can log in and view my dashboard at my demandon any time	High	Sprint-1
Customer needsto do	Dashboard	USN-6	As a user I must capture images of my vehicle and upload it into the web portal	I can capture the entirevehicle and upload	High	Sprint-2
Customer (Web user)	Details about estimated cost basedon damage	USN-7	As a user I must receive a detailed report ofthe damages present in the vehicle and thecost estimated	I can get the estimated insurance cost	High	Sprint-3

Customer Care Executive	Details about Estimated cost Based on damage	USN-8	As a user, I need to get support from developers in case of queries and failure of service provided	I can have smooth user experiences and all the issues raised are sorted	Medium	Sprint-4
Administrator	Details about Estimated cost Based on damage	USN-9	We need to satisfy the customer needs in an efficient way and make sure any sort of errors are fixed	I can finish the work without any problems	High	Sprint-4

## 6. PROJECT PLANNING & SCHEDULING

Title	Description	Date
<b>Literature Survey and Information Gathering</b>	Gathering Information by referring the technical papers, research publications etc	10 October 2022
<b>Prepare Empathy Map</b>	To capture user pain and gains Prepare List of Problem Statement	10 October 2022
<b>Ideation</b>	Prioritize a top 3 ideas based on feasibility and Importance	10 October 2022
<b>Proposed Solution</b>	Solution include novelty, feasibility, business model, social impact and scalability of solution	10 October r 2022

<b>Problem Solution Fit</b>	Solution fit document	11 October 2022

Customer Care Executive	Details about Estimated cost Based on damage	USN-8	As a user, I need to get support from developers in case of queries and failure of service provided	I can have smooth user experiences and all the issues raised are sorted	Medium	Sprint-4
Administrator	Details about Estimated cost Based on Damage	USN-9	We need to satisfy the customer needs in an efficient way and make sure any sort of errors are fixed	I can finish the work without any problems	High	Sprint-4

## SPRINT DELIVERY SCHEDULE Project

### Tracker, Velocity & Burn down Chart

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date(Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	3 Days	3 Nov 2022	6 Nov 2022	20	09/11/2022
Sprint-2	20	3 Days	6 Nov 2022	9 Nov 2022	20	19/11/2022
Sprint-3	20	3 Days	9 Nov 2022	12 Nov 2022	20	17/11/2022
Sprint-4	20	3 Days	12 Nov 2022	15 Nov 2022	20	20/11/2022

### Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day).

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

## Burn down Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

Vehicle Damage Detection is used to reduce claims leakage during insurance processing. Vehicle Inspection and validation are usually done. As it takes a long time, because a person needs to come and inspect the damage. Here we are trying to automate the procedure. Using this automation we can avoid time consumption for insurance claim procedure

## 10. ADVANTAGES & DISADVANTAGES

### ADVANTAGES

- ✓ The advancement of image analysis and pattern recognition technologies, the auto insurance industry could significantly benefit.
- ✓ Our proposed system is that it was user friendly and highly efficient.
- ✓ The proposed system maintain privacy and also Working accuracy.
- ✓ It saves user time and energy.
- ✓ Images with various orientation of vehicle will also be analysed

## DISADVANTAGES

- The Major Drawback Of The Proposed Model Is That It Only Identifies The Physical Visible Damage And Not Of The Internal Or The Interior Damage.
- Blurred image or image with poor lighting will not yield accurate results.
- Application file size is large, leading to long computation time.

## 11. CONCLUSION

- ❖ In this work of Damage analysis of a vehicle in general and insurance reclaim, a system has been designed using CNN and image classification which takes the input from a user as an image to test the severity of damage, which happens in a sequence of two steps.
- ❖ First being the image classification, here the input provided by the user is processed by the neural network to identify the car that is if the car is damaged or not.
- ❖ This software as a service (SaaS) will be a stepping stone to establish a server to client authenticated interaction to yield accurate results. Data security plays a vital role in the information era, aligning with CIA principle of cryptography user data is stored securely in cloud.

## **12. FUTURE SCOPE**

- ◇ This further research is implementing the proposed algorithm with the existing public datasets. Also, various segmentation algorithms can be implemented to improve accuracy.
- ◇ A higher quality dataset which includes pivotal parameters like location information and repair costs, the research could go a step further in predicting the cost of damage repair based on the image.
